On Wednesday, November 14th, the Vancouver Police Marine Unit and crews from the Canadian Coast Guard, Kitsilano Base, responded to a report of an unoccupied vessel running in circles in Coal Harbour. The VPD Marine Unit was able to determine that the occupant of a small “coach boat” had fallen overboard and had been recovered by another coach boat in the area. It was also determined that the operator was not wearing a “KILL SWITCH”. Fortunately there were no injuries in this incident. Several people are killed or seriously injured every year as a result of being thrown out of their vessel and subsequently run over as their vessel circles around them in what is referred to as “The Circle of Death”. Wearing a kill switch connected to your vessels ignition can prevent the “Circle of Death”.
