

STOLEN BOATS CANAD

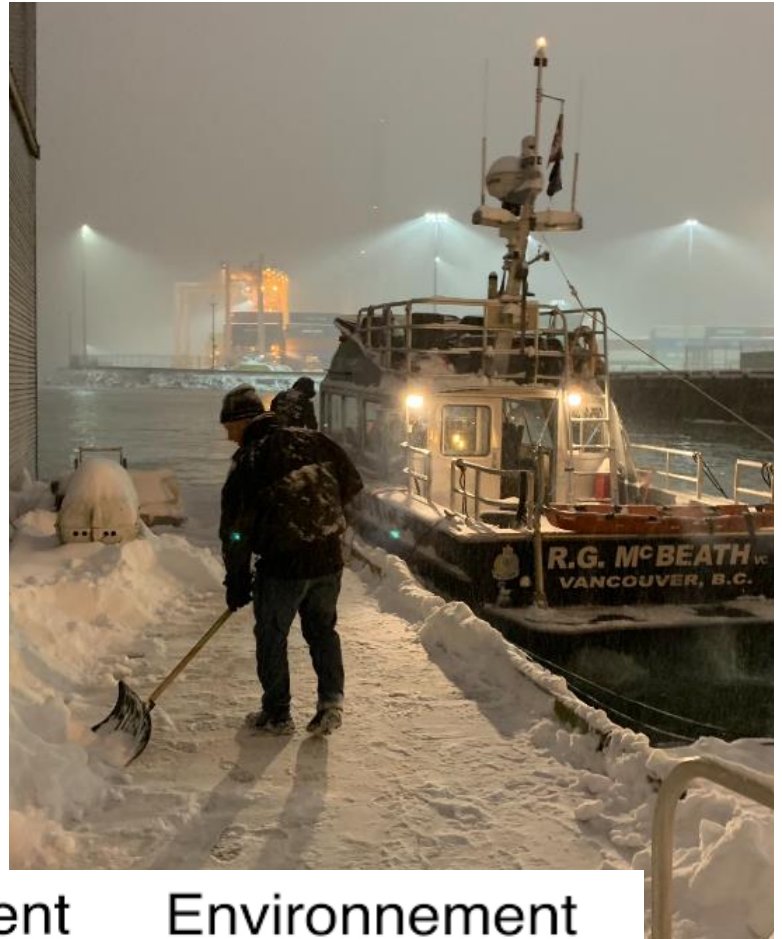

(Public Service- Non Profit)

WEATHER WARNING

A reminder for boat owners and operators to continually monitor their vessels during winter weather. Snow and ice build up can negatively affect the stability of your vessel. Bilge water can freeze, rendering bilge pumps inoperable. Rain and melting snow can quickly overwhelm even a functioning bilge pump.

Boat owners that store their vessels on land should also tend to their vessels regularly during winter weather to ensure vessel covers are not compromised by the weight of snow build up. Monitor weather reports on VHF or on line.
